

BLACKLINE CONNECTOR

Providing The Bridge Between Dynamics GP & BlackLine

Opal's BlackLine Connector for Microsoft Dynamics GP is a powerful solution for automation and reconciliation of key financial data. The connector parses, formats, and transfers your financial information on a schedule you define.

HOW DOES IT WORK?

The BlackLine Connector is configured with users credentials that run a Windows Scheduled Task which then executes a procedure to create the extract files on the desired frequency. The procedure can be adapted for each customer in order to provide the required data to BlackLine.

Fully Supported Component

Includes maintenance for setup, updates, new features, and configuration changes.

Automatic Data Changes

Either on-demand or on-schedule with set and forget integration to Task Scheduler.

On Premise Application

eConfigured by end users to store local servers and connection strings as well as BlackLine FTP settings.

Fast track your integration with BlackLine - sign up today!
